## Sustainability Policy

### Ecological thinking and behavior

This thinking spans all our company divisions, from product development, procurement, production, and logistics to product recycling.

MATERIALS	PRODUCTION	TRANSPORT	USE	DISPOSAL
Maximum use of materials to eliminate and minimize scraps. Use of recyclable and recycled materials in those components that do not affect the functionality and durability.	Maximum optimization of energy use. Minimal environmental impact. Last generation technological systems.	Detachable systems. Volumes that facilitate the optimization of space. Maximum reduction of energy consumption by transport.	Quality and warranty. Long lasting.	Waste reduction. Supplier-manufacturer packaging reuse system. Components are easy to be separated.

This Alismail Sustainability policy all or our economic, ecological, and social efforts. Today, people and companies have a much greater awareness of their responsibilities towards the environment than they did 20 years ago.

### Taking responsibility for nature and society

Awareness of our environment has increased in recent years. At Alismail sustainability has always played a central role. As a company, we see ourselves as a role model with a responsibility to act sustainably and to take social responsibility. With the aim of protecting both the environment and future generations.

### Responsible family business

The work Alismail does is focused on people. As a privately-owned business with tradition, we build our success on sustainable relationships. We take responsibility by being conscious of society and the environment in our actions. Our employees are the basis for our business success, which is why we cater to their needs decently, fairly, and respectfully. Sustainable growth is just as important to us as the long-standing relationships we have with our

customers. Thanks to our integrated and future-focused approach to work, our solutions are long-lasting and thus sustainably geared toward our customers' needs.

### **Steel - recyclable material**

For almost 50 years, we have based our work as a producer of furnishing and storage solutions on the recyclable material steel. Steel is an ecological material by nature and is 100% recyclable. Steel can be melted down over and over again without any loss in quality.

### **Long-lasting products**

Furniture items made from steel are particularly long-lasting commodities. A Alismail locker, for example, is used for at least 30 to 40 years before being returned to the material cycle.

### **Certification**

Quality at the highest level—from the products to the processes Alismail has been certified in the areas;

- ISO 9001:2015 Quality Management Systems
- ISO 14001:2015 Environment Management Systems
- ISO 45001:2018 Occupational Health & Safety Management Systems

This ensures that quality remains consistently high across all divisions and processes.
