

David WILLIAMS (Senior Vice President)

David started his career in loss control consulting back in 1980's. With almost three decades of experience in noise and vibration assessment and control for civil construction and mining industries, he brings extensive practical expertise to his role, providing our clients the knowledgeable service they have come to expect. He began his OZA career working as a field vibration technician, gaining valuable experience in construction vibration measurement, and thereafter conducting thousands of pre and post construction structure surveys before serving in a management capacity. While fulfilling his leadership responsibilities, David continues to provide direct consulting services towards developing procedures, specifications and monitoring programs, conducting assessments and providing expert testimony relevant to the protection of property adjacent to construction and mining sites. He has extensive experience both in field and management roles for many key projects. Affiliations include but are not limited to: International Society of Explosives Engineers, Deep Foundations Institute and several construction associations.
