RE: SCA#2 Ash Landfill
Run-on / Run-off Control Plan

Dear Rusty,

I have reviewed the existing Run-on / Run-off Control Plan dated September 2016 for the SCA#2 Ash Landfill. This plan was prepared in accordance with the requirements of 40 CFR Section 257.81 and Utah R315-319-81 for an existing CCR landfill. Codes require that the plan be reviewed and revised (if necessary) at least every five years. The plan addresses conditions that exist at different times during the construction of this landfill and current conditions do not substantially affect the written plan in effect.

The plan is designed to prevent storm water flow onto the active portion of the CCR unit during the peak discharge from a 24-hour, 25-year storm. The plan is also designed to collect and control at least the water volume resulting from a 24-hour, 25-year storm which comes in contact with the active portion of the CCR unit. This run-off from the active portion of the CCR unit is handled in accordance with the surface water requirements under 40 CFR 257.3-3 and Utah R315-303-2(3)

Sincerely,

S. Scott Carlson, PE. PLS
Twin Peaks P.C.
