

BUSINESS PROFILE:

SERIAL Automation is in the business of providing automation support services to Professional Audio Video Integrators. We have experience and extensive knowledge in AV engineering where we can provide system designs, equipment commissioning, DSP and Automation programming, system diagnostics, as well as installation assurance and project management on your AV projects within the following industries: government, military, commercial, educational, and residential.

In today's economy it is hard for any Professional AV Integrator to keep a fully qualified staff of professionals that can provide all the services required to complete an automation project or provide ongoing maintenance once the installation is completed. We can help the Professional AV Integrator fill in the gaps that they may find themselves in today.

All of our Professional Services are designed around the premise of Synergy. Synergy is defined as the idea that the value and performance of two companies combined will be greater than the sum of the separate individual parts. With this in mind the AV Integrator can offer a larger skill set when it comes to the implementation and ongoing maintenance of an automation system.

SERVICES OFFERED:

We specialize in the following services for your Audio Video and Control needs:
