

## Annual Drinking Water Quality Report

TX1050018

Wimberley Water Supply Corporation

Annual Water Quality Report for the period of January 1 to December 31, 2014

For more information regarding this report contact:

This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water.

Name: Garrett Allen

Phone: 512-847-2323

Wimberley WSC is Ground Water

Este reporte incluye información importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono 512-847-2323.

### Sources of Drinking Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPAs Safe Drinking Water Hotline at (800) 426-4791.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; persons who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders, can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care providers. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* are available from the Safe Drinking Water Hotline (800-426-4791).

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. We are responsible for providing high quality drinking water, but we cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

### Information about Source Water Assessments

Wimberley Water Supply Corporation water source is groundwater from the Trinity Aquifer in Hays County

The TCEQ completed an assessment of your source water and results indicate that some of your sources are susceptible to certain contaminants. The sampling requirements for your water system are based on the susceptibility and previous sample data. Any detections of these contaminants may be found in this Consumer Confident Report. For more information on source water assessments and protection efforts at our system please contact Paul Polhemus @ 512-847-2323.

For more information about you sources of water, please refer to the Source Water Assessment Viewer available at the following URL: <http://www.tceq.texas.gov/gis/swaview>  
 Further details about sources and source-water assessments are available in Drinking Water Watch at the following URL: <http://dww.tceq.state.tx.us/DWW/>

3 – LA TOYA TRAIL	LA TOYA TRAIL	GW	Y	LA TOYA TRAIL, WIMBERLEY, TX.
4 – WIMBERLEY HILLS	WIMBERLEY HILLS	GW	Y	112 NORTH PALOMA TRAIL, WIMBERLEY, TX.
5 – WAYSIDE DRIVE	WAYSIDE DRIVE	GW	Y	771 WAYSIDE DRIVE, WIMBERLEY, TX.
6 – EAGLE ROCK	EAGLE ROCK	GW	_____	NO SUCH ROAD, WIMBERLEY, TX.

### 2014 Regulated Contaminants Detected

#### Coliform Bacteria

Maximum Contaminant Level Goal	Total Coliform Maximum Contaminant Level	Highest No. of Positive	Fecal Coliform or E. Coli Maximum Contaminant Level	Total No. Positive E. Coli or Fecal Coliform Samples	Violation	Likely Source of Contamination
0	1 positive monthly sample	1		0	No	Naturally present in the environment.

Source of Contamination (if known)	Date of positive <i>E. coli</i> sample	Date of Corrective Action	Corrective Action	Potential Health affects
Unknown	10/20/2014	10/21/2015	Raw groundwater was disinfected as normal to prevent any E.coli positive samples within the distribution system. As a corrective action required by TCEQ two wells were disinfected per TCEQ specifications found in the chapter 290 Rules. Special sampling did follow the disinfection process and monthly raw water samples will be taken from each well for a minimum of one year for continued monitoring.	Fecal coliforms and E.coli are bacteria whose presence indicates that the water may be contaminated with human or animal wastes. Microbes in these wastes can cause short-term effects, such as diarrhea, cramps, nausea, headaches, or other symptoms. They may pose a special health risk for infants, young children, and people with severely compromised immune systems.

They may pose a special health risk for infants, young children, and people with severely compromised immune systems.

**Lead and Copper**

Definitions:

-Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

-Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Lead and Copper	Date Sampled	MCLG	Action Level (AL)	90 <sup>th</sup> Percentile	# Sites over AL	Units	Violation	Likely Source of Contamination
<b>Copper</b>	06/29/2013	13.	1.3	0.184	0	ppm	N	Erosion of natural deposits; Leaching for wood preservatives; Corrosion of household plumbing systems.
<b>Lead</b>	06/29/2013	0	15	3.9	0	ppm	N	Corrosion of household plumbing systems; Erosion of natural deposits

**2014 Disinfectant Residual**

Disinfectant	Year	Average Level	Minimum Level	Maximum Level	MRDL	MRDLC	Unit of Measure	Violation	Likely Source of Contamination
Chlorine (Free)	2014	1.03	.78	1.39	4	4	ppm	N	Water additive used to control microbes

**Water Quality Test Results**

Definitions: The following tables contain scientific terms and measures, some of which may require explanation.

Avg: Regulatory compliance with some MCLs are based on running annual average of monthly samples.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Water Quality Test Results**

Maximum residual disinfectant level goal or MR: The level of a drinking water disinfectant below which there is no know or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

- MFL: million fibers per liter (a measure of asbestos).
- na: not applicable.
- NTU: nephelometric turbidity units (a measure of turbidity).
- pCi/L: picocuries per liter (a measure of radioactivity).
- ppb: micrograms per liter or parts per billion – or one ounce in 7,350,000 gallons of water.
- ppm: milligrams per liter or parts per million – or one ounce in 7,350 gallons of water.
- ppt: parts per trillion, or nanograms per liter (ng/L).
- ppq: parts per quadrillion, or picograms per liter (pg/L).

**Regulated Contaminants**

Disinfectants and Disinfection By-Products	Collection Date	Highest Level Detected	Ranges of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Total Trihalomethanes (TTHM)	2014	3	2.6 – 2.6	No goal for the total	80	ppb	N	By- product of drinking water disinfection.

Inorganic Contaminants	Collection Date	Highest Level Detected	Ranges of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Barium	02/15/2011	0.0267	0.0157 - 0.0267	2	2	ppm	N	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits.
Fluoride	2014	1.09	0.37 – 1.09	4	4.0	ppm	N	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Nitrate [measured as Nitrogen]	2014	0.23	0.02 – 0.23	10	10	ppm	N	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits.
Radioactive Contaminants	Collection Date	Highest Level Detected	Range of Levels Detected	MCLG	MCL	Units	Violation	Likely Source of Contamination
Beta/photon emitters	05/13/2010	6.9	0 – 6.9	0	50	pCi/L*	N	Decay of natural and man-made deposits.

\*EPA considers 50 pCi/L to be the level of concern for beta particles.

Gross alpha excluding radon and uranium	05/13/2013	3.9	3.1-3.9	0	15	pCi/L	N	Erosion of natural deposits
---	------------	-----	---------	---	----	-------	---	-----------------------------

Wimberley Water Supply Corporation regularly scheduled Board Meetings are on the third Thursday of every month at 8AM. Our annual meeting is the first Tuesday in March. Our meeting dates are posted on our website. [www.wimwat.com](http://www.wimwat.com)
