# Precision Planting®

# CleanSweep®

Clean rows...effortlessly.

Uniform germination and higher plant counts depend on clean rows.

Clean rows are the work of row cleaners.

But, until now, row cleaners have been hard work themselves, because they need to be set precisely and changed frequently. CleanSweep® does all that hard work for you. It puts row cleaners right where they need to be – where they move the residue but not the soil – and continuously adjusts them as field conditions change. All you need to do is move the cab-mounted controller. You can even raise the row cleaners up and out of the way when you're not using them.

The CleanSweep controller is connected to dual air cylinders on each row. The air pressure comes from a robust compressor or tank, or you can use 20/20 AirForce® as an air source.

**\*Available To Fit Martin And Most Yetter Row Cleaners!**
