

A clinical research study for people with obesity or overweight and type 2 diabetes

GZP2

GZP2 is a clinical research study from Eli Lilly and Company. It is testing if an investigational medicine (a medicine being studied) can safely help people with obesity or overweight, and type 2 diabetes manage their blood glucose (sugar) levels and reduce their body weight.

Can I join this study?

Yes, you may be able to join the study if you:

- are 18 years of age or older
- have a BMI of 25 or higher
- have type 2 diabetes
- have not had any significant changes to your type 2 diabetes treatment for at least 3 months before joining the study
- have tried to lose weight by changing what you eat but it did not work
- have not lost or gained more than 11 pounds (5kg) of your body weight over the last 3 months

BMI stands for body mass index. It is a number that compares a person's weight to their height.

It can be used to check if a person is at risk for certain health conditions. If you do not know what your BMI is, you can ask your doctor.
