

On the first day of July, 2015, as this man, now 45 years of age, left his work of some twenty years, and he knew he was indeed a fortunate fellow. He had a wonderful wife, Judy, two lovely young children, and an excellent job. All of this was his as he traveled down Route 20 at approximately 6:30 p.m. In that place and at that time the inattention of this defendant would forever destroy the work and the dream of a lifetime.

This collision was caused when the defendant crossed the centerline, striking Nick's vehicle. The defendant will deny this and will bring you the testimony of someone who was two football fields away, with an extremely limited view, to say that the accident occurred in the defendant's lane. To the contrary, the physical evidence on the roadway, the fluid from the radiators, the glass, the metal, and the gouges which occur at the place where vehicles come together clearly demonstrate a collision in Nick's lane. An engineer who studies collisions will tell you the physical evidence on the roadway allows for no other scientific explanation.
