

Flow Meters

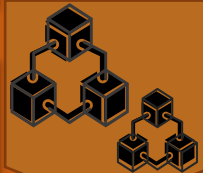

A Variety of Instrumentation is used to ensure the integrity of a pipeline system. TSPS offers NIST calibrated Flowmeter rentals to help you accurately determine the Displacement Rate and Total Volume of your System to be Tested.

3rd party NIST calibration certifications for all Flowmeters maintained and retested every 6 months.

1" – 2" Flowmeters come with 602 Hammer Union Connections standard while 3"- 8" come with Figure 100 Hammer Union connections to ensure a quality seal.

1" – 8" Flowmeters available

Positive displacement flow meters are unique as they are the only meter to directly measure the actual volume. All other types infer the flow rate by making some other type of measurement and equating it to the flow rate.

It all starts with a phone call.
