To whom it may concern,

This letter is to confirm that Amros Corporation did an excellent job for Escopeta Oil & Gas Corporation to identify the potential of our under explored area.

Amros generated Production Profile and Brittleness calculations for 8 vertical wells based on open-hole log data. The results matched well with core data analysis, mud logging and well testing. Amros identified the best formation and built production maps for these formations. In addition the trajectories and initial production for horizontal wells were identified. We can now identify the areas where we can drill up to 6 high producing horizontal wells in the same location.

The service companies that worked with us before Amros could not produce these definitive results.

A handwritten signature in black ink, appearing to read "D. Davis".

Danny S. Davis

President of Escopeta Oil & Gas Corporation
