

 Name _____

 Date _____

1. Complete the equation and the statement by using a mixed number. Draw a model to help you. Then divide.

7 apples are shared equally by 4 friends.

Divide:

4	7

$$7 \div 4 = \underline{\hspace{2cm}}$$

Each friend gets _____ apples.

2. Divide, and express the quotient as a mixed number. Use vertical form to help you.

$$9 \div 2 = \underline{\hspace{2cm}}$$

2	9

3. Find $52 \div 6$. Express the quotient as a mixed number.

REMEMBER

4. Subtract.

$$7\frac{2}{8} - 3\frac{7}{8}$$

5. Jada measures the growth of 10 tomato plants and lists the data in a table.

- a. Use the data in the table to create a line plot.

Plant	A	B	C	D	E	F	G	H	I	J
Growth (inches)	$1\frac{2}{8}$	$\frac{7}{8}$	$1\frac{3}{8}$	$1\frac{2}{8}$	$\frac{5}{8}$	1	$1\frac{2}{8}$	$\frac{4}{8}$	$\frac{6}{8}$	$\frac{7}{8}$

- b. What is the difference in inches between the growth of the plant with the greatest amount of growth and the plant with the least amount of growth?
