"The mission of Broad Top Area Medical Center, Inc. is to provide access to affordable, high-quality care without discrimination."

Due to the complexity of the medical insurance industry, it is important that we know whether you have an existing doctor. These physicians are often referred to as your PCP Primary Care Provider. For many insurance plans, he or she is the only provider who can approve of you receiving non-emergency care for things such as office visits, X-rays, lab tests, cardiac stress tests, colonoscopy, and referrals to specialists, etc. If we see you for non-emergency care and order such things without PCP approval, you would then be billed personally for the costs. By signing this statement, you acknowledge this responsibility. Your signature also indicates that you have no other PCP.

CONTROLLED SUBSTANCE CONTRACT

Patient's Name: _____ **Date of Birth:** _____

Controlled substance medications (i.e. narcotics, tranquilizers, stimulants, benzodiazepines and barbiturates) are useful, but have a high potential for misuse. They are closely controlled by local, state, and federal governments. They are intended to reduce pain, improve functions, and/or ability to work; manage anxiety, reduce distractibility and improve attention.

Management of Attention Deficit Disorder with or without hyperactivity may involve the use of controlled substances. The ADD management plan includes assessment and reassessment of your need for therapy. The plan may also include behavioral therapy, educational support, counseling, or other therapies established between the patient and a single provider.

Management of anxiety may involve the use of a controlled substance. Anxiety management includes assessment and reassessment of your need for therapy. The use of a benzodiazepine is intended for short term use in the management of anxiety. The use of a long-acting medication for generalized anxiety disorder may be warranted. The plan may also include behavioral therapy, educational support, counseling, or other therapies established between the patient and a single provider.

Pain management involves a thorough history and physical for the cause of the pain. A plan of management will be established between the patient and a single provider. The pain management plan often involves multiple therapies that include but are not limited to physical therapy, regular exercise, yoga, osteopathic manipulative therapy, and massage therapy. Pain management may also include specific pain medications prescribed based on the types of pain present. It is mandatory that all aspects of the plan are adhered to.
