

PARADISE DENTAL TECHNOLOGIES

Creators of the Montana Jack® and Innovators of Dental Product Design

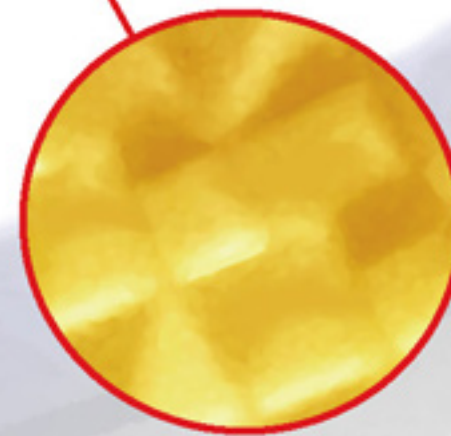

100% Made in the USA

Feel the Difference!

- Sharper, thinner blades
- Highest quality 440A stainless steel
- Unique heat treat & cryogenic formula
- Uniform molecular grain structure:
 - Harder, tougher blades
 - Lasts 2-7 times longer

- Solid Resin Handle
- Comfortable Grip
- Ultra Light
- Superior Control
- Tactile Sensitivity

Superior Quality. Lower Price. Best Value!

The one and only Montana Jack® Sickle Scaler is 100% made in the USA by Paradise Dental Technologies. Jack is ultra-light, thinner, tougher, harder and sharper than all the rest. Our innovative design is still unmatched!

The Montana Jack® has the perfect contra angle for the most universal adaptation of all instrument designs! In the anterior, the instrument adapts to provide a more favorable handle position allowing greater visibility and is not as close to the patient's face as compared to adapting an H6-7. Practitioners also report that the Montana Jack® accesses throughout the posterior with less ergonomic stress and is more comfortable for the patient. The ease of adapting this PDT designed instrument is one of many reasons hygienists choose the Montana Jack® as the number one instrument over the anterior H6-7 and the posterior 204S. Hygienists recently voted the Montana Jack® as the **#1** instrument they could not live without!

The Montana Jack's® sharp and durable blade provides convenient interproximal access with its very thin sickle blade. PDT's unique process of heat treat and cryogenics produces a molecular grain structure in the steel that results in optimal hardness without sacrificing strength. This process allows for thinner blades while maintaining the greatest durability. This means you get a longer lasting instrument that will drastically reduce the amount of sharpening required. When sharpening is necessary, keep it feeling brand new with the Gleason Guide™ which will hone the cutting edge and maintain the proper instrument shape and angulation.

The Montana Jack® features a solid resin handle that allows for the ultimate tactile sensitivity. Weighing in at only 13 grams it is one of the lightest instruments on the market, and the comfortable large diameter handle has extended knurling for superior control and greater maneuverability.

The combination of these features has made the Montana Jack® the **#1** instrument hygienists cannot live without. Dentists also like this instrument as an interproximal carver especially for overhangs and cement removal!

Do you know Jack?
