

## AEV'S FIRSTSTAR TYPE III MODULAR 146

Packed with features, yet purpose built for affordability, durability and minimal maintenance.

AEV's Firststar™ Type III Modular 146" unit on a Ford E-350 Chassis is truly revolutionary in its design fabrication and materials. Modern and hard-wearing gel-coated fiberglass is used throughout to make up the wall units, cabinetry, work areas and squad bench. Radius edges and seamless cabinetry are not only easier to clean and disinfect between patients, but the smooth edges reduce the risk of emergency responder injuries during collisions or sudden braking. The all-aluminum vehicle body features a fully-welded tubular super structure with aluminum exterior skin, which exceeds the federal standards for ambulance safety.

Extra 10 Inches  
in Cab
