Internationals

FEATURING: DUAL-WEDGE LIMB & TUNER

LENGTHS
66" 69" 70"
WT. AT 28"

\$150.00

Staghorn "MODERN" concept with clean lines, swept back look and exceptional performance symbolic of today's space age. Brazilian Rosewood riser with overlays. Dual-Wedge Limbs & Tuner included. Made to order handle balanced for any special release. Mass weight 2-1/2# to 3#, int. wt. added per order to 4#. Maximum center cut, Tuner inletted. Remarkable stability added with Dual Wedge Limb. Slightly more speed than comparable bows. Padded zipper case. Lifetime Guarantee. Ownership transferable. Accidental damage, serviced under \$25.00 maximum service charge. Unlimited time. Delivery about four weeks.

DUAL-WEDGE LIMB

Staghorn achievement of 1966. Dual-Wedge construction consists of a layer of woven fibre - glass cloth .010" thick placed in a diagonal direction between the dual wedges of hard maple. This diagonal stressing resists torque, and when torqueing does occur, Dual Wedge causes the limbs to recover their correct position simultaneously with the release of the string, allowing the string to travel through its intended plane.

Dual-Wedge available on most other Staghorn models at \$25.00 extra charge.

STAGHORN TUNER

Moves entire arrow rest unit in or out for windage adjustment to accommodate different arrow sizes, diameters, types, and spines. Sight window cut maximum depth for installation. Tuner inletted. Any side rest may be used. Attaches to plate. Available separately at \$12.95.

DELUXE Tempests

LENGTHS
62" 64" 67" 69"
WT. AT 28"

\$99.50

Staghorn's Sportsman's Model. Step into the World of Speed. If long range shooting or Bare Bow style is for you, close the gap and aim on target. No need for a second hunting bow. Even longer models out distance most hunting bows of the same weight. Tournament styling, Zebra wood with overlays. Made to order handle. Bow balanced for special release. Mass weight 2# to 2-1/4#, additional int. wt. to 3#. Center cut to order. Performance: Exceptional speed, smooth shooting. Bow case included. Full Guarantee. Available at extra charge: Rosewood riser. Dual Wedge Limbs. Delivery 3 to 4 weeks.

Bow pictured is sample model of new 64" XP Hunting Bow.

Tested performance matches the XP-60.

Higher sight window.

Supplied in rosewood riser with overlays, and brown glass.

Further specifications as XP-60.

The XP-60 (experimental hunting model 1960)

Four years in experimental, one year in field test, a year on the market from the cold of Alaska to the heat of South Africa, in 40# weight to 100# weight, no XP has broken or required service.

XP specifications called for a bow that would give the hunter every advantage: Maximum speed and limb efficiency, the stability of a tournament bow, minimum tendency toward limb twist, and a length short enough for maneuverability and easy stringing, long enough to draw evenly through 30".

The effectiveness of the XP in hunting is conclusive proof that it is all of these things.

We, at Staghorn, feel that the very short bow leaves something to be desired as a best hunting model.

Masters

LENGTHS
58" 60" 66"
WT. AT 28"

\$69.50

Excellent performance in a beautiful looking bow. Bengé riser, white, brown, or green glass. Full center cut, Standard handle with thumb rest. Mass weight about 2#, bow case included. Full Guarantee. Delivery three to four weeks. Handle small, medium, or large.

Badgers

LENGTHS
58" 66"
WT. AT 28"

\$59.50

Staghorn quality in a modestly priced bow. Full dimensions, first quality materials, full guarantee. Standard models in dark or light wood or black epoxy as available. Modified performance for dependable stable shooting. Weights 25# to 60#. Handle proportioned to weight. Mass weight under 2#. Bow case included. Delivery three to four weeks.

ORDERING INFORMATION

MODEL – Order by Series and bow length. Generally, longer bow lengths are preferred when draw length is over 28".

WEIGHT – Staghorn Bows are rated at 28" and for draw weight only. Weight increases evenly at about 1-3/4# per inch of draw. Draw length is measured to the outside edge of shelf.

HANDLE – Determined by wrist position at full draw. Elevated, level, slightly dropped, dropped, full hand pressure. Submit outline of hand with pressure points indicated, angle of thumb and fingers, and open or closed grip. Information not required for Masters and Badgers.

RELEASE* – STANDARD - one finger above nock, two below. GUNBARRELING - three fingers under nock. WALKING THE STRING - varying finger position according to distance.

STRING NOCK – Position relative to arrow rest.

ARROWS – Length, size, and type. Feathers or vanes.

ARROW REST – Height above shelf. Position forward or back of center.

SIGHT WINDOW – Depth may be cut to center, 1/8", 3/16", 1/4", 5/16" past center. Height is maximum permitted by riser length.

DELIVERY – Specify required delivery date. Standard delivery three to four weeks.

Personal specifications will be carried out within the limits of durability and good taste.

*For smooth shooting and best performance, it is necessary to specially balance the bow for any release that moves the hand on the string away from a standard release.

STAGHORN SPECIFICALLY

With the high efficiency of Staghorn Bows, use overspined arrows, factory recommended fistmele, and slightly heavier string for best performance.

For best groups, set arrow rest or striker plate at center or forward of center – never toward the inside.

For best arrow flight, nock the arrow 1/4" or 5/16" above level of arrow rest. We recommend arrows cut slightly longer than draw length.

Give your bow the care and attention you would give any highly accurate and expensive piece of equipment.

STAGHORN GUARANTEE

From date bow is serial numbered, all Staghorn bows are guaranteed for five years on durability of design, workmanship, and materials. Finish guaranteed for one year. Maximum service charge beyond guarantee or in case of accident, \$25.00. Transferrable. Service period unlimited.

It is your bow, but it is our product. Treat it with care.

DID YOU KNOW THAT...

- heat is your bow's worst enemy
- keeping bow limbs in alignment as well as keeping arrows straight is the responsibility of the archer
- too high a fistmele can cause limb twist
- limb vibration is a product of balance, not imbalance
- changing your finger position on the string or your style of grip can put your bow out of balance
- the cut of the handle determines whether or not a bow will balance vertically in your hand
- arrow spine changes with draw length. A 35# arrow will not necessarily shoot well from a 35# bow if your draw length is longer or shorter than 28".

If you would like further information on any question or the name of your nearest dealer, feel free to write the factory at any time.

THE STAGHORN STORY

Staghorn Bows are the product of three generations of bow making. From Belgium, many years ago, where difficult archery games taxed bowmakers ingenuity, through America's transition from casual shooting to competitive tournaments, to today's demand for highly developed equipment, bow making has been a challenge and an art in the Pyle family.

Since 1951 when the bows came under company name, Staghorn has produced only top line bows of quality, beauty, and maximum performance. The knowledge of forces, balance, and strength factors influencing their design and production has proved Staghorn Bows to be so durable that a lifetime guarantee is possible.

To serve the serious shooter is an interest, to create for the experienced archer is a pleasure.

Staghorn international shipments through Pacific Air Freight from O'Hare International Airport, Chicago and in the United States and Canada by parcel post.
