ECONOMY ADDED 227K JOBS IN NOVEMBER; UNEMPLOYMENT RATE INCREASES TO 4.2%

US job growth rebounded in November with improved payroll gains after the lackluster October jobs report reflected labor disruptions due to hurricanes and union strikes.

The Labor Department on Friday reported that employers added 227,000 jobs in November, while the nation's unemployment rate ticked higher to 4.2%, up from 4.1% a month ago.

The number of jobs added in the prior two months were both revised higher, with job creation in September revised up by 32,000 from a gain of 223,000 to 255,000, while October was revised up by 24,000 from a gain of 12,000 to 36,000.

Private sector payrolls added 194,000 jobs in November. Themanufactuing sector saw employment rise by 22,000 jobs in November, including an increase of 32,000 in transportation equipment manufacturing following the return of workers who were on strike.

Government employment rose by 33,000 jobs in November, with the growth concentrated in state government (+20,000). The government sector's gains were mostly in line with the 12-month average gain of 41,000.

The labor force participation rate was 62.5% in November, having shown little change in the last year, with it remaining in a narrow range of 62.5% to 62.7% from December 2023.

STRATEGICALLY FOR CREDIT UNIONS

The outlook for consumers' purchasing outlook saw average hourly earnings for all employees on private nonfarm payrolls rising by 13 cents, or 0.4%, to \$35.61. In the past 12 months, average hourly earnings have risen by 4% - significantly below the pace of consumer inflation.

The number of people considered to be long-term unemployed, defined as being jobless for 27 weeks or more, was little changed at 1.7 million in November compared with a month ago. The figure is up 1.2 million from last year. The long-term unemployed accounted for 23.2% of all unemployed people in November.

The economy continues to make some headway by the relatively healthy amount of job and income gains, but a further increase in the unemployment rate tempers some of the shine in the labor market and potentially gives the Fed what it needs to cut rates in December.

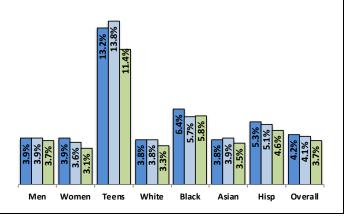

Federal Reserve policy-makers are due to meet in mid-December to discuss a potential interest rate cut. The market's expectations that the Fed will cut rates by 25 basis points rose following the jobs report release, with the probability rising from 71% a day ago to 87% as of Friday morning.

Once again, the Fed is dangerous between a rock and a hard place. To cut rates too mch, too soon will send the economy into another hyper-inflationary enironment. But to wait too long, too little could adversely impact the economy's growth potential.
