

# Frequently asked questions; Business Card Cutters

Do I have to pass my cards twice to get a complete business card?

-No, these automatic machines will do your gutter cuts and in one pass you will have your completed business card.

Can I cut other type cards like postcards?

-Absolutely, Custom size cartridges can be made.

If I purchase an additional cartridge for my SBCC-24T and decide to upgrade to the SBCC-24A later on, can I use that cartridge on my new machine?

-For sure, the cartridges are the same for both machines.

How do I sharpen the blades?

-Both machines have a self-sharpening mode that you should set it at. We recommend at least doing it once a week. The cycle takes about 5 minutes on either machine.

What is the max paper size?

-Maximum sheet size is 12" x 18"

How many cards are produced per sheet?

-A sheet of 12 x 18 will produce 24 business cards.

What kind of material can I cut?

-You can cut laminated paper, coated stock, card stock, photo paper and more.

What is the thickest stock I can run on this machine?

-Paper thicknesses vary a bit but the machines have been tested up to 16 pt.

How fast are these business card cutters?

-These machines will cut about +200 per minute.

Will this machine work for cards printed on a digital machine?

-Absolutely! Our business card cutters are equipped with a register mark reader. When you print your sheet you will include a small barcode on top. When you feed the sheet through the machine, it will read the bar code and adjust to compensate if your image has slightly moved which is usually the case with digital printing.
