

pLAN Stand Alone Network

Programmable Local Area Network

Local and remote monitoring can be achieved with our advanced microcontroller. Based systems are used to provide standalone supervision and control over a pLAN network giving the flexibility of a BMS system at the fraction of the cost.

The pLAN communication option allows two or more systems to talk to each other, pLAN can be programmed for system rotation and for system failure over redundancy.

- Supports up to 16 units
- Lead/lag with multiple active & standby
- Unit rotation and auto changeover
- Alarm switch over to standby
- Assisted cooling
- Assisted heating
- Assisted humidification
- Dehumidification
