

Flint & Broadway Streetscape

Streetscape improvements were undertaken by the Village of Lake Orion and its DDA to enhance their nationally-registered, historic downtown. Designed in conjunction with a major utility and repaving project on Flint and Broadway Streets, the streetscape project incorporates safety improvements including curb bump outs and a raised tabletop intersection. The raised intersection not only improves pedestrian safety, and calms traffic, the area is now more easily used for community events. Featured sustainable design elements include LED globes for pedestrian street lighting and the use of various recycled materials including reclaimed bricks. Additional aesthetic improvements include street trees, benches, decorative fencing, and bike racks. The project was partially funded with an Enhancement Grant from the Michigan Department of Transportation.
