

TEMPLE MOUNT DIMENSIONS

The purpose of this illustration is to highlight some very Significant Numerical Values of the Temple Mount in Jerusalem. These Measurements are an Approximation and based from Google Earth Coordinates. There appears to be some very striking Numerical Coefficients that could be related to a Measurement-to-Year Correlation Theory. One particular Number, 5776 or 2016 is regarding the Measurement of the Inner Square of the Temple Mount Platform. Based on one's Interpretation and Calendar Calculation, 5776 is a Sabbatical and Jubilee Year, if one counts from the Liberation of the Temple Mount in 1967. Note that 2016 Feet, is the Perimeter Length of the Inner Square that the Dome of the Rock is situated on. This Perimeter is also approximately 666 Yards and .33 Miles. One noticeable Measurement of the Outer Square is that its Perimeter is 911 Smoots in its current Dimension. What this study suggests, is that this Correspondence of the Inner Square, could perhaps be an Encoded Date or 'Clock' to when Israel is to begin the Construction of the 3rd Temple or have there be an Event that would secure such an Endeavor.

3rd TEMPLE

Despite the current Political, Social and Religious Objections, Prophecies from the Book of Daniel the Prophet and the Book of Revelation bear Witness to Events that are shortly going to come to Pass. The 3rd Temple of YHVH will be built by the Jews. Here is one Conceptual Rendition of how the Temple Mount might look given the Alternative View of not having the Dome of the Rock as the Focal Point for the Edifice, but rather to the North over the Dome of the Tablets.
