

Design Guide – Skype for Business Room

Skype for Business Room

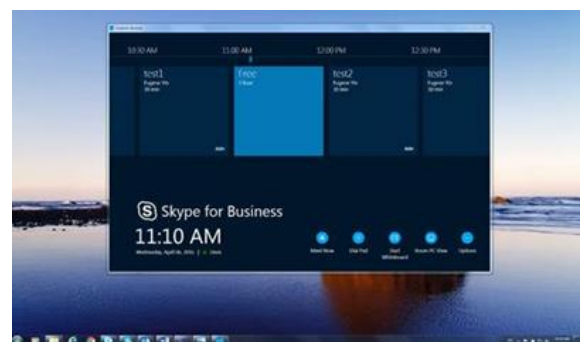

From the industry leader in smart conference room solutions, Crestron RL 2 is a complete group collaboration solution. It combines Crestron hardware with Skype® for Business software, the popular and powerful server-based application that many companies already use on a daily basis.

Crestron RL 2 enables real-time group collaboration on conference room displays, rather than on personal laptops. It incorporates video, voice, interactive content sharing, presence, and chat from one touch screen interface.

Crestron RL 2 and legacy Crestron RL systems also now support Skype for Business server upgrades. In combination with Skype for Business, Crestron RL 2 makes it possible for people within a room to collaborate with customers and partners anywhere, anytime

Features

- One-touch Microsoft Skype for Business
- Simple user experience
- Single or Dual Screen

i-Klarity Video Solutions

Bundled in four complete, versatile packages, Crestron RL 2 provides everything needed to turn any space into a true collaborative meeting space. Using your existing infrastructure, Crestron RL 2 connects over the corporate LAN so implementation is fast and inexpensive. With just a single CAT5e cable, the touch screen can be connected to the UC codec and conveniently placed anywhere in the room, even the far end of the table, without extenders.

Simply mount the display, connect Crestron RL 2 to the network, and authenticate. No system design or programming is needed. If your organization already uses Skype for Business for video, no additional licenses, fees, or infrastructure expenses, such as MCUs, gateways, or external PCs are needed.
