GLAUCOMA SURGERY

PLEASE READ CAREFULLY BEFORE SURGERY

Before Surgery	
Medical:	-A medical must be done by your family doctor about 1 month or as soon as possible before surgery; medicals are valid for 3 months assuming no health changesPlease bring the enclosed medical form to your doctor to complete at your appointment -If you fail to have your medical done, your surgery will be postponed.
Drops:	-Continue your drops as usual until you arrive at surgeryInstructions for additional surgery drops are enclosed.
Surgery:	
Date:	
Arrival time:	am/pm (walk in door time) -Total length of time there is approximately 2 hours, from start to finish. You are not allowed to drive yourself home (taxi is acceptable provided no sedation is given)
Location:	Holy Cross Surgical Services Suite 101, 2210 2 nd St SW, Calgary, AB T2S 1S6
Parking:	Pay parking available in parking lot, enter in main doors. You can <u>not</u> drive yourself home from surgery (taxi is acceptable provided no sedation is given)
1 Day after surgery2 Days after surger	ppts (at Richard Way Office); 7: ry: ery:

IMPORTANT GLAUCOMA SURGERY INSTRUCTIONS

BEFORE SURGERY

- If you are on Coumadin, please ensure you have your INR checked approximately 5 - 7 business days prior to surgery.
- Do not have any solid food or milk products <u>after midnight before surgery</u>, this includes gum or candy. Do not drink any alcoholic beverages for 24 hrs before surgery.
- You may drink up to 1 cup clear fluids 4 hours before surgery (e.g. tea or coffee with NO dairy/sugar added, apple juice, water, clear broth, jello).
- Your operation may be cancelled due to acute medical conditions (e.g. severe cold). If in doubt, contact your surgeon's office prior to surgery.
- Take all your medications as normal before surgery with sips of water.
- If you use glaucoma drops in the surgery eye, take them the morning of surgery. After surgery, Dr. Ford will instruct you on the use of your eye drops. A prescription is enclosed with instructions regarding additional drops required for surgery.

THE DAY OF SURGERY

- It is recommended to have someone accompany you to and from surgery. Please make your own arrangements. Mild sedation is an option at the surgery center provided someone will be with you the entire day of surgery
- Please bring your Alberta Health Card and Identification
- Wear loose comfortable clothing. Nothing tight or constricting.
- Please do not wear jewelry or makeup. If you wear contact lenses, please remove them before surgery.
- You will check in at Surgical Centres Inc. reception area. There is a waiting room if your driver needs to wait.
- They will have you sign a consent form and then take you to the back to see the anesthetist. He/she will administer either the anesthetic drops or the local anesthetic, which will freeze the whole side of your face.
- Once the anesthetic has taken effect, you will walk to the surgical suite where Dr. Ford will do your surgery.
- You will lie on a surgical bed while covered with a sterile surgical drape. The surgery itself takes about 20-45 minutes and you will be awake for the whole procedure.
- Dr. Ford will put bandages and a shield over your eye after surgery

AFTER SURGERY

- Leave your eye patch on overnight and the next day until your appointment with Dr. Ford. Do not remove the patch to take any eye drops.
- Go home & rest. Resting quietly the day of surgery is recommended
- You will have a 1 day, 2 day and ~1 week post-surgery follow-up appointment at Dr. Ford's office. Further appointments will depend on healing but will likely be quite frequent for several weeks
- You may experience numbness of your face, eye and head for up to 6 hours after surgery.
- If you experience discomfort, you may take Tylenol as recommended.
- If you experience severe pain, call the office at 403-245-3730 during daytime hours. After hours, to receive telephone advice, call Calgary Health Link at 811. For an emergency, go to the hospital emergency department (Rockyview Hospital in Calgary).
- You may eat regular meals following surgery.
- DISCONTINUE GLAUCOMA DROPS/PILLS FOR YOUR SURGERY EYE ONLY AND USE YOUR POST-OPERATIVE DROPS UNLESS OTHERWISE ADVISED. Continue any drops you take for your non-surgery eye as normal.

POST-OPERATIVE ADVICE FOLLOWING SURGERY

- If you have any questions about your eyes, please call the office.
- Wear eye shield at night for 2 weeks. Tape to face with medical tape or fix the eye shield with elastic (e.g. like a pirate patch).
- Your wound is healing and it will not be firm enough to stand too much pressure for about six weeks.
- Avoid all dirty/dusty environments, stooping, straining, lifting and vigorous activities for at least two weeks. It is impossible to list all the activities you should avoid. Try and sleep propped up for 5 days after surgery.
- Avoid closing the eyes tightly. Never rub or touch the eye. Take care when washing face, avoid getting water or soap in the eye.
- If there is a lot of discharge from the eye upon waking, wipe off the lids with moist cotton, but avoid exerting pressure on the eye, particularly the upper lid. If there is any sticky, colored discharge continuing during day, call the office.
- Wash your hands thoroughly before and after putting in eye drops.
- You may have the feeling of something in the eye due to the incision, but do not close the eye tightly. This feeling may persist for a few weeks, artificial tears may help provide some relief.

PRE-SURGERY MEDICAL FORM

PLEASE RETURN WITHIN 3 WEEKS BEFORE SURGERY (Form is valid for 3 months provided no changes)

Dear Dr		,

USE OF ANTI-METABOLITE MEDICATIONS	•

These agents, applied during or after the surgery, reduce the growth of scar tissue, a common cause of failure in glaucoma surgery. Mitomycin-C and 5-Fluorouracil were originally approved for the treatment of various types of cancer. Upon approval, the drug manufacturer produces a "label" that explains its use. Once a drug is approved, physicians can use it for other purposes "off-label" as part of the practice of medicine if they are well-informed about the product, base its use on firm scientific method and sound medical evidence, and maintain records of its use and effects.

COMPLICATIONS

As with any surgical procedure, there are risks associated with glaucoma surgery. For instance, there is always the possibility that the surgery will not help to control your eye pressure. Eye drops or more procedures may be needed. Not every conceivable complication can be covered in this form but the following are examples of risks encountered with glaucoma filtering surgery. These complications can occur days, weeks, months, or years after. They can result in loss of vision or blindness. Careful follow-up is required after surgery. After your eye heals you will still need regular eye exams to monitor your pressure and to watch for other eye problems.

Risks of the surgery and use of anti-metabolites (either early or late in healing)

- Failure to control eye pressure, with the need for another operation
- Vision could be made worse or, in rare cases, totally lost
- Early or late increase of pressure in eye (glaucoma)
- Pressure that is too low (hypotony)
- Unintended corneal and/or scleral damage, ie. thinning, perforation
- Infection, early or much later
- Abnormal collection of fluid in eye requiring a second operation
- Bleeding in the eye
- Chronic inflammation
- Cataract except in those cases where the cataract has been removed
- Irritation or discomfort in the eye that may persist
- In spite of surgery, vision could become worse from continuing degenerative changes in the eye

Risks specific to anesthesia injections around the eye

- Perforation of eyeball
- Needle damage to the optic nerve, which could destroy vision
- Interference with circulation of the retina
- Possible drooping of eyelid
- Systemic effects causing life-threatening complications and death

PATIENT'S ACCEPTANCE OF RISKS

I understand that it is impossible for the doctor to inform me of every possible complication that may occur. By signing below, I agree that my doctor has answered all of my questions, and that I understand and accept the risks, benefits, and alternatives of glaucoma surgery. I authorize my surgeon to use anti-metabolite medication if needed.
