

After clearing the brush and laying a foundation, our “shed” finally arrived. 16x40. It took two months to build and deliver. It came down the road like a mobile home.

They unloaded it by tilting the trailer up and then driving out from underneath it.

We took down part of the fence so they could drive it in.

Bringing it in. Of course it starts pouring rain!

It's in. Yay!!!

We decided it was not worth it to run and bury electric 150 feet to the shed.

So we went with a deep cycle 12 volt battery for power. We connected it to an inverter and a surge protector. This is what runs the three lights.

And

Let
there
be
light...
and it
was
so.

All
Done.

On to
the next
project!
