

GNR-H2200 Industrial Controls Training System

Purpose

The Hampden Model GNR-H2200 Industrial Controls Training System provides students with practical "hands-on" experience in designing, wiring, checking out, and troubleshooting "real-world" motor control systems.

Description

The Hampden Industrial Controls Training System consists of a 3/4" thick melamine covered wood core panel, 36"H x 48"W, on which are mounted interchangeable unitized control modules. The student selects just the components needed for a particular system, secures them on the panel with wing nuts and wires them in accordance with the control diagram. All pushbuttons, contactors and other control components are suitably rated for use with 1HP motors.
