**Precision Planting® vSet®**

Every 1% Loss in Singulation Costs You up to 2.5 Bu/A\*

Meter performance is a key contributor to yield. If your meters perform at less than 99% singulation, you are losing out on yield. Walk your fields and measure off 17' 5" of one of your 30" rows. Is there one skip? Is there a double? Are there more? Can you afford that at today's grain prices? Every Seed Counts

Planting refuge corn mixed in with your traits? Using high-rate seed treatments or inoculants? Seed not consistently graded? Successfully singulating seed is getting harder. Not all meters can handle these inconsistencies in seed shape, size, and density. How well is your meter performing today?

**Get 99%+ Singulation in Corn with vSet**

vSet uses a high vacuum setting and an aggressive singulator to properly singulate seeds across a variety of sizes and shapes. There is no need to change the disk, the singulator settings, or the vacuum level. By the time the disk passes the singulator, one seed is ready to drop down the tube. Every time. Just pour in the seed and plant.

Please Call For Availability.

# Precision Meter

Improve planter performance where it counts – in the meter.

Ordinary finger meters have a hard time singulating, especially with a wide variety of seeds. They'll miss one, then grab two, resulting in skips and doubles. That not only wastes seeds, it cuts your yield.

Because the components all mesh perfectly, Precision Meters hold one seed at a time, then release it. They're engineered and built to do it again and again. You'll see fewer skips and doubles – and higher yield.

If you don't need a whole new meter, you can still improve your spacing with Precision Meter belts, backing plates or finger sets. We are a Premier Precision Planting dealer and can test your meters and recommend upgrades.

WE CAN TEST MANY  
POPULAR BRANDS OF  
METERS INCLUDING:  
JD  
KINZE  
WHITE  
GREAT PLAINS  
AND MORE...

**A WORD FROM THE METER ROOM**

Since 2009 we have done our very best to ensure top quality meter performance on over 10,000 meters.

Our MeterMax Ultra test stand gives the most precise information of any test stand on the market.

With this Knowledge we can determine how accurate your meters are performing. If improvements are needed, we can repair and calibrate them using top quality parts.

Bring in a meter today for a free evaluation. We can develop a plan on how to improve your meters performance for any size operation or budget.

**\*Suggested meter evaluation @ 100-125 acres per row.**  
**\*Replace finger meter brush @ 50 acres per row.**

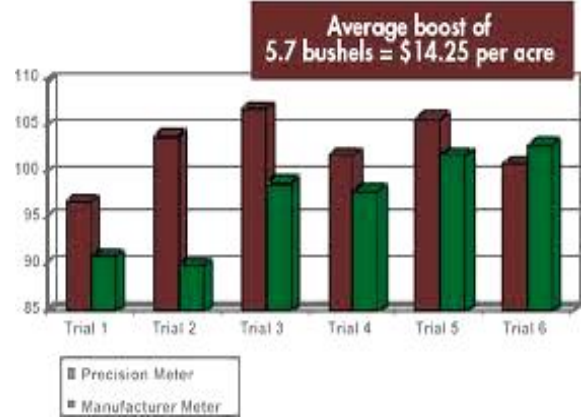

# Precision Meter

Precision Meters are engineered and built to do it again and again. Ordinary finger meters have a hard time doing that (singulating), especially with a wide variety of seeds. They'll miss one, then grab two, resulting in skips and doubles. That wastes seeds, robs yield and steals your money.

The key features of the Precision Meter are;

- Adjustable Brush**...allows fine tuning for different seed sizes and shapes.
- Precision Finger Set**...loads and holds a single seed due to tougher spring and properly formed flag.
- Population Max** backing plate...rigid so to stabilize the fingers.
- Skip Stop**...cushioning prevents the seed from ricocheting back into the seed pool.
- Sure Fire**...seed belt delivers the seed down the center of the tube increasing excellent seed spacing.

The eSet meter:

- best-in-class singulation
- outstanding reliability
- easy to maintain
- easy to use

Precision Planting®  
eSet®

Selecting the eSet meter is a no-brainer. It has a flat disk with a single vac setting, eliminating constant adjustments. It releases seeds down the center of the tube – critical to optimum spacing. It has a 5-lobed singulator that makes sure no two seeds of any kind can occupy the same hole. One seed locks in and one seed drops. Every time.

eSet is a star of simplicity. It handles any seed size or shape without finicky tweaks to vac pressure, disk or singulator settings. Just pour in the seed and go. Then get ready for your best possible yield.

A simple replacement for OEM vacuum disks on John Deere planters. You get the disk, baffle, singulator, brushes and seed extractor. Everything mounts to your existing meter housing (1991 or later).

## “PRO CHUTE” BULK SEED BOX CHUTE

Empty your seed boxes directly into your planter. Seed flows smoothly and quickly when you attach the PRO Chute to your bulk seed box. The funnel system is made of UHMW for durability, wear resistance, and slick properties. In as little as four minutes you can empty your seed box with the PRO Chute II. Quick attach for safe unloading. Our PRO Chute snaps into your seed box in under five seconds, without looking underneath to line up brackets. Never stand underneath a raised box again. There is a full 79" of clearance from the lift to the end of the PRO Chute giving you maximum clearance. Slide Gate controls the seed flow.

7.5" x 62" PRO CHUTE I  
 10.5" X 62" PRO CHUTE II

## VORTEX

### GREAT FOR PLANTING INTO COVER CROPS!

This blade is an excellent choice when being used on a planter ahead of a spiked closing wheel, or when additional stirring is needed. An excellent replacement for a "Turbo" type coulters.

## 25 WAVE

The 25 Wave coulters work a 5/8" wide strip in front of a trailing knife or nozzle application. This coulters is less likely to pull "Chunks" out like a 13 wave in wet soil.

## 13 WAVE

The 13 Wave is the original coulters used by many O.E.M. manufactures. In most seeding conditions we feel this coulters has poor penetration and seed depth.

### PLANTER MAINTENANCE TIPS:

- \*Check your seed tube guards between the opener discs for proper operating width. A John Deere or Kinze planter should have a guard width measurement of no less than 1/2" at the bottom, and 3/4" across the top.
- \*15" seed openers should be replaced at an overall diameter of 14.5".
- \*Use an equal amount of shims on each side of the opener.

## CARLISLE SPOKED GAUGE WHEELS

Traditional closed gauge wheels tend to plug when planting conditions are less than ideal. The Spoke Planter Gauge Wheel from Carlisle helps you avoid that frustrating downtime. The open-wheel design allows soil and residue to flow through the spokes, so you spend more time planting and less time cleaning out gauge wheels.
