

For years, I suffered with dizziness, diagnosed as vertigo, was given medicine, this was over a period of years. It was really terrible. Finally, I started keeping meclizine on hand, that was like a bandaid fix.

Finally, after 20 years, my new family MD advised me to Dr. Scott Sanders, an experienced balance doctor, gave me test on hearing and brain function, came to conclusion I suffered from migraine headaches when I was younger 'til I turned 40 years old.

Finally, I have a medication that keeps the dizziness at bay. I am checked every few months, what a relief!
