Eye” by Prof. Hiroshi Fukui

Insects may utilize UV-rays to identify objects. The color and shape of a flower would appear
different in the insect especially under UV-rays. The photographs of the flowers were taken
under illumination of visible-and UV-rays (ca 360 nm, UV-C) in the dark.

About APACE

APACE (Asia-Pacific Association of Chemical Ecologists) is organized to promote the understanding of interactions between organisms and their environments that are mediated by naturally occurring chemicals. Research areas include the study of structure, function, synthesis and biosynthesis of natural products related to organisms, their importance at all levels of ecological organization, their evolutionary origin and their practical application.

APACE was officially inaugurated at a symposium meeting held in conjunction with the Third Asia-Pacific Conference of Entomology in Taiwan on Nov. 21, 1997, and past APACE Conferences were held in the following cities.

The 1st Conference: Nov. 1999 Shanghai, China

The 2nd Conference: Aug. 2001 Penang, Malaysia

The 3rd Conference: Oct. 2005 Jeju, Korea
