B1532	JD/ KINZE/ WHITE 15"	RIDGID	\$455 SALE

Properly designed row cleaners provide a very desirable type of tillage. With row cleaner teeth continuously engage the soil to the shallow depth of 1" to 1 1/2". By scarifying the soil's surface layer it makes it easier for the seed openers to open a well defined "V" without furrowing out or causing slabbing or fleaking. Eliminating furrows is the key to preventing erosion in the row on slopes and the ponding of water over the row in level areas. Martin Row Cleaners come in two basic types: **rigid** and **floating**.

All Martin Row Cleaners have the following features:

- 3/8" thick, high-strength wheels with diamond shaped points
- Stationary triple-lip seals
- Heavy-gauge oval dust caps
- Double tapered bearings
- Greaseable hubs

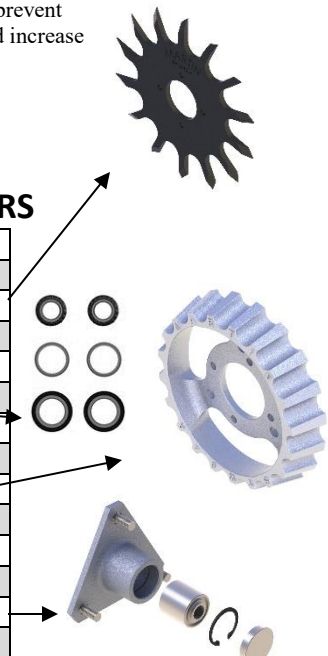

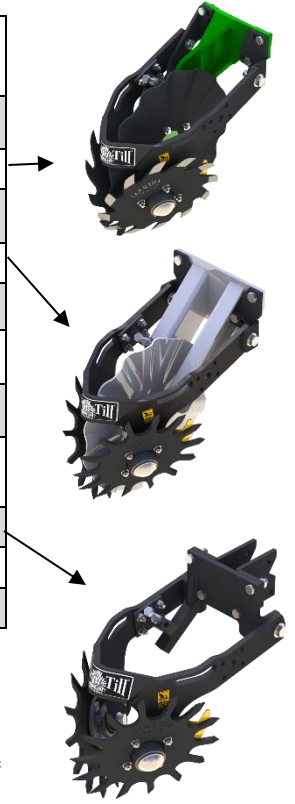

Side Treader Wheels

Side treader wheels are a very good option for the floating row cleaners because they help prevent unwanted trenching in softer parts of the field. Recent Farm Journal tests show a large yield increase when using this option.

REPLACEMENT PARTS FOR MARTIN ROW CLEANERS

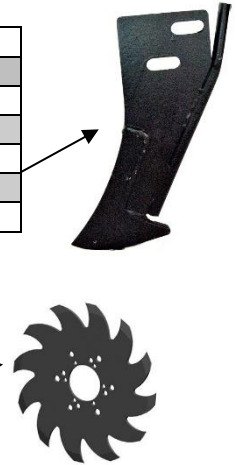

PART #	APPLICATION	PRICE EA.
RTW1412.5L/R	12.5" RAZOR WHEEL	\$ 61.00 SALE

YETTER 2960 DOWN PRESSURE SPRING KIT

In tough planting conditions, the 2960 Heavy-Duty Spring Kit provides planters with up to 300 pounds of additional down pressure.

2960-126 \$ 169-PER ROW SALE

- Provides spring down pressure for John Deere 7000, 7200, 1700, Kinze 2000-2700 planters.
- Features five settings and adjustment ranges for pressure.

Precision Planting®

FurrowJet™

FurrowJet is a planter fertilizer attachment which enables you to place not only an in-furrow starter fertilizer, but also a dual-band of fertilizer 3/4" on each side of the seed. FurrowJet rides in the furrow just above the seed, firming while placing starter. Wings on FurrowJet angle downward to cut into the sidewall and place fertilizer alongside the seed in a dual-band. By being near-furrow, this placement gives the seedling and crown roots immediate and continuous access to the nutrients. Combined with accurate placement, FurrowJet is flexible, allowing increased rates and common starters to be applied safely, avoiding seed burn risk.

DeltaForce®

DeltaForce replaces the springs or air bags on your planter with hydraulic cylinders. It automatically increases or reduces weight with military precision, on each row individually.
