BRUCELLA CANIS (IFA)

Test	Result	Reference Range	Flag	Bar Graph
BRUCELLA CANIS	NEGATIVE			
<p>Comments:</p> <p>Titers begin at 1:50, with positives titered to 1:200. Low titers (at 1:50) may indicate early infection, antibody response blunted by the use of antibiotics, or a false-positive due to cross-reacting antigens. Recommend either retesting in 30 days or confirmatory testing using AGID methodology.</p> <p>Positives at 1:100 are suggestive of brucellosis. Highly recommend confirmatory testing using AGID methodology.</p> <p>Positives at 1:200- Highly recommend confirmatory testing using AGID methodology and consultation with a clinical pathologist.</p>				

Canine Genetic Health Certificate TM

Call Name: Revely
Registered Name: Wywrdwnd's by Dawn's Early Light
Breed: Labrador Retriever
Sex: Male
DOB: July 2008

Laboratory #: 9929
Registration #: SR50840701
Microchip #: 01582855
Certificate Date: June 2, 2015

This canine's DNA showed the following genotype(s):

Disease	Gene	Genotype	Interpretation
Progressive retinal atrophy, Cone-rod dystrophy 4	<i>RPGRIP1</i>	WT/WT	Normal
Progressive retinal atrophy, Progressive rod-cone degeneration	<i>PRCD</i>	WT/WT	Normal

WT, wild type (normal); M, mutant

Paw Print Genetics™ performed the tests listed on this dog. See the Laboratory Report for interpretation and recommendations based on these findings. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the tests' accuracy and precision. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory immediately for further evaluation. Genetic counseling is available at Paw Print Genetics.

Laboratory Report

Laboratory #: 9929
Order #: 3344
Ordered By: Susie Morrill
Ordered: April 6, 2015
Received: May 26, 2015
Reported: June 2, 2015

Call Name: Revelly
Registered Name: Wywrdwnd's by Dawn's Early Light
Breed: Labrador Retriever
Sex: Male
DOB: July 2008
Registration #: SR50840701
Microchip #: 01582855

Results:

Disease	Gene	Genotype	Interpretation
Progressive retinal atrophy, Cone-rod dystrophy 4	<i>RPGRI1</i>	WT/WT	Normal
Progressive retinal atrophy, Progressive rod-cone degeneration	<i>PRCD</i>	WT/WT	Normal

WT, wild type (normal); M, mutant

Interpretation:

Molecular genetic analysis was performed for specific mutations of two genes reported to be associated with disease in dogs. We identified two normal copies of the DNA sequences in the genes tested.

Recommendations:

No mutations were identified. Thus, this dog is not at an increased risk for the diseases caused by or associated with the mutations tested. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. Paw Print Genetics™ has genetic counseling available to you at no additional charge to answer any questions about these test results, their implications and potential outcomes in breeding this dog.

Date: November 7, 2010
Record Number: 165291
Owner Name: Brandt, Lorna
Patient Name: Reveille

DIAGNOSIS: Normal CERF examination in both eyes

VISIT SUMMARY:

Revelee Brandt, a 2 year-old male intact yellow Labrador Retriever, presented to the VCA Raleigh Hills Animal Hospital Ophthalmology service on November 7, 2010 for a CERF (Canine Eye Registration Foundation) examination.

PROGNOSIS:

Normal CERF examination at this time.

INSTRUCTIONS:

- 1) Yearly examinations are recommended. Please schedule the appointment as soon as possible because Ophthalmology can book several weeks in advance.
- 2) Please contact Dr. Nathan Kice at 503-292-9227 or 503-656-3999 if you have any questions or concerns.

Thank you for entrusting us with care of Reveille!

PTPLA gene test result

A buccal swab from:

Call name: **Reveille**

Registered: **Wywrdwnd's By Dawns Early Light**

with the number: **AKC SR50840701**

with Identification: **Microchip 015 828 55**

certified by a veterinarian? **No**

has been received at The Alfort School of Veterinary Medicine on

2012-03-22

DNA was extracted, analyzed and has been shown to contain

Two PTPLA gene copies with no insertion in exon 2

>> clear of the CNM mutation and
not at risk for transmitting the deleterious gene <<

and as a consequence received the CNM database registration number :

LR-CNM12-172-M-PI
