#### 4. FIRST AID INFORMATION

THRESHOLD LIMIT VALUE (TLV) AND SOURCE: NA  
EFFECTS OF OVEREXPOSURE: None in normal use  
EMERGENCY FIRST AID PROCEDURES:

##### **Skin and Eyes:**

Do not pick up a shorting battery as it may cause a burn. Lithium reacts with moisture; do not pick up a damaged or hot battery without proper hand protection. Get immediate medical attention when eyes may have been exposed to battery contents from a ruptured battery

##### **Swallowing:**

*LITHIUM COIN CELL SAFETY NOTICE: Keep lithium coin batteries out of the reach of small children; coin cell batteries can be accidentally ingested. If ingested, these batteries may leak harmful contents causing chemical burns, perforation of soft tissue, and in severe cases may cause death. Lithium coin batteries must be removed immediately if swallowed. Seek medical attention immediately. If you or your doctor suspects that a battery has been ingested-for assistance in the US call the NATIONAL BATTERY INGESTION HOTLINE any time at (202) 625-3333; in Canada call 416-813-5900*

#### 5. FIRE FIGHTING MEASURES

FLASH POINT: NA  
LOWER (LEL): NA  
FLAMMABLE LIMITS IN AIR (%): NA  
UPPER (UEL): NA  
EXTINGUISHING MEDIA: Use foam, dry powder, Lithex™, or water\* as appropriate.  
AUTO-IGNITION: NA

**SPECIAL FIRE FIGHTING PROCEDURES:** As with any fire, wear self-contained breathing apparatus to avoid inhalation of hazardous decomposition products (See section 2). Water will cool the fire but may react with available lithium in the batteries producing flammable hydrogen.

**SPECIAL FIRE OR EXPLOSION HAZARDS:** DO NOT RECHARGE. As a typical sealed battery they may rupture when exposed to excessive heat. Rupture may expose lithium to moisture causing it to react or release flammable or corrosive materials. Do not accumulate undischarged batteries together.

**\*Do not use water on these batteries if fighting fire within an enclosed area. Evolving hydrogen may build up and auto-ignite.**

---

---

---

## 6. ACCIDENTAL RELEASE MEASURES

**TO CONTAIN AND CLEAN UP LEAKS OR SPILLS:** In the event of a battery rupture, prevent skin contact and contact with moisture or flammable/combustible materials. If possible, collect all released material in a metal container. Place damaged cells in mineral oil or graphite if available.

**REPORTING PROCEDURE:** Report all spills in accordance with Federal, State and Local reporting requirements.

---

---

## 7. HANDLING AND STORAGE

Store batteries in a dry place. Storing unpackaged cells together with other combustible materials could result in cell shorting and fire. Do not recharge. Do not puncture or abuse.

## 12. ECOLOGICAL INFORMATION

Consumers should dispose of discharged batteries through waste disposal services or legitimate collection outlets. Those collecting batteries should follow state and federal regulations. Partially discharged damaged batteries can overheat and cause fires in the presence of other combustible materials.

---

---

## 13. DISPOSAL CONSIDERATIONS

Always comply with Federal, state or local requirements. Hazardous waste generators should check with the USEPA or their state authorized agency for guidance.

## 14. TRANSPORTATION INFORMATION

TRANSPORTATION-SHIPPING: These are lithium metal coin cells, also known as primary or non-rechargeable lithium. These CR and KECR cells, unless exempted, are regulated as Class 9, see UN3090. Our CR and KECR cells meet the general regulatory requirements for shipping Lithium batteries and, when in our original packaging, meet the requirements listed in the Special Instructions or Packing Instructions noted below and may be classified as non-dangerous goods for transportation.

USDOT – See 49 CFR 173.185 and Special Provision 188. Also note: these cells are forbidden on passenger aircraft to/from or within the US and must be labeled accordingly even for ground or ocean transport.

IMO/Ocean – See Special Provisions 188 and 230.

ICAO/IATA – Effective January 1, 2015 the Rayovac cells designated with “CR” & “KECR” can be shipped by air in accordance with International Air Transport Association (IATA) 56th edition, Section II, since these cells have less than 0.3 g of Lithium per cell. Our batteries designated with “RL” and “RLCR” have lithium amounts that fall within the Section 1B requirements and those cartons require additional labeling. See Packing Instructions: PI 968 (Batteries), PI 969 (Batteries, packed with

equipment) and PI 970 (Batteries, contained in equipment) as applicable for detailed shipping instructions. Also see Special Provision A201 for carrying these batteries on airplanes.
